COLLABORATION AS BIG DATA ETHICS

Big data analytics promise to solve weighty social problems. Yet, which stakeholders drive big data questions? How can computer scientists, community groups and social scientists work together to build on what we know about power, surveillance, privacy and collaboration? How can we build in our commitment to equity in big data analytics? This workshop aims to discuss how to build ethical big data practices with leading scholars and practitioners.

September 29-30, 2016

Virginia Tech Research Center, Arlington

900 Glebe Road, Arlington, VA

[Two blocks from the Ballston Metro]

OPEN TO THE PUBLIC
