The Center for Firefighter Injury Research and Safety Trends, **FIRST**, is a research, education, and practice enterprise supporting the United States fire and rescue service through objective data collection and analysis.

The FIRST Center is proud to present the 2023 class of **Fire Service Injury Research, Epidemiology, and Evaluation (FIRE) Fellows** and announce the joint Reflection Event & Information Session. Hear from the 8th class of Fellows as they reflect on their experiences with developing a workplace violence prevention course and a diversity, equity, and inclusion (DEI) toolkit for first responders.

In 2016, FIRST developed the inaugural FIRE Fellowship to give students the opportunity to work with real world data, build relationships with community stakeholders, and become immersed in the fire service through field experiences. FIRE Fellows work in a collaborative manner using both **quantitative and qualitative** methods to move the needle on firefighter safety and health. Many Fellows use the summer immersion as their **Applied Practical Experience,** and most continue this work as their second year **Integrated Learning Experience**.

This year's **paid, fulltime, 10-week summer intensive** training period **will take place June 24 – August 30, 2024** and is funded by the International Association of Fire Fighters (IAFF) and FEMA Assistance to Firefighters Grants. Selected Fellows will be contributing to fire service projects including workplace violence prevention; diversity, equity, and inclusion; and safety climate assessment and analysis.

FIRE Fellow Applicants must complete an online application by **Thursday, February 22nd, 2024,** and must be available to interview through Zoom on **Wednesday, March 6th, 2023.**
