Join a team where you will have an impact!

Developing Engineers will apply the theoretical knowledge learned in college to practical applications in the chemical manufacturing world to help us build a sustainable future.

If you are looking for the equation that helps you reach your professional goals and achieve your personal aspirations, welcome to Arkema!

Use your Smartphone to scan the QR code above or visit **ark.ma/DEP** to learn more.

The initial Developing Engineer assignment lasts two years, where graduates can benefit from both hands-on plant activities and a corporate training program. After two years, you will move to a new location, where training and development will continue. From this point, further relocations are encouraged but not required. The exposure to multiple plant experiences gives the opportunity for rapid learning and early responsibility.
