GREEN INFRASTRUCTURE, CLIMATE, AND CITIES SEMINAR SERIES

SEMINAR SERIES OVERVIEW

MORE THAN HALF OF THE WORLD'S POPULATION NOW LIVES IN CITIES. This demographic shift creates a host of new opportunities, but also some new risks, especially given the challenges posed by climatic extremes. This timely seminar series focuses attention on these issues, and what decision makers, researchers, and practitioners are learning about how to address them.

The first two sessions focus on the specific climate risks in the urban Northeast US, and Philadelphia in particular, and how the public thinks about climate change and makes associated decisions. The remaining sessions focus our attention on innovative adaptation and mitigation strategies involving green infrastructure.

All seminars are free, and held at 4:00 PM on the first Wednesday of every month at Drexel University. Refreshments will be provided. The sessions will be broadcast live via webcast and recorded.

RSVP IS REQUIRED.

DATE	TENTATIVE TOPIC
April 2, 2014	What Do We Know About Climate Risks Facing Philadelphia and the Urban Northeast?
May 7, 2014	How Do Local Decision Makers and the Public View Climate Change?
June 4, 2014	Planning Green Infrastructure with Stakeholder Input
July 2, 2014	Green Infrastructure: Enhancing Cities by Managing Stormwater
August 6, 2014	Green Infrastructure and Heat Island Mitigation
September 3, 2014	The Psychosocial Basis for Urban Greening
October 1, 2014	Green Infrastructure and Environmental Health and Safety
November 5, 2014	Green Infrastructure and Coastal Resilience
December 3, 2014	Green Infrastructure and Public Health
January 7, 2015	Green Infrastructure, Urban Planning, and Economic Development
February 4, 2015	Urban Greening and Ecosystem Services
March 4, 2015	Assessing Ecosystem Services Associated with Urban Trees
